

Just off the production line we have the OK790 kit to suit GSX1300R Hayabusa 2008-2009.

A fully bracketed and cross braced style of kit. **Promoto** have really gone to town on this baby to ensure that the kit is super strong and will give maximum protection with out having to modify the fairing.

The Hayabusa kit will be **\$465.00 RRP** which is extremely good value when you consider the complexity of the bracket system and the quality of materials used and especially the fact that there is no need to cut a hole in a perfectly good \$1000.00 fairing panel. Available with black or white sliders

See [Promoto Melbourne - Frame Sliders - Axle Armour - Oggy Knobs](#) for more information and model fitment instruction pdf's.

Only the most suitable, resilient materials are used to ensure strength, performance and appearance. State of the art manufacturing techniques, like CNC machining, laser cutting and robotic MIG welding are used in the production process for accuracy and perfect fit.

Brackets are made from high tensile steel alloy for great strength and minimal weight. Bolts are high tensile, de-embrittled, zinc plated and clear chromated.

In almost all applications 7075 T6511 aircraft grade aluminium is used for its high tensile strength.

The plastic used in the sliders is Acetal for excellent abrasion resistance, strength and attractive machined finish. All components are fully finished for corrosion resistance and durability as well as a pleasing appearance.

Oggy Knobbs™ are available from quality motorcycle dealers Australia wide.

Why settle for anything but the best insist on **Oggy Knobbs**™
